

Provisioning SQL Databases

Duration: 5 Days **Course Code: M20765**

Overview:

This course is designed to teach students how to provision SQL Server databases both on premise and in SQL Azure.

Target Audience:

The primary audience for this course is individuals who administer and maintain SQL Server databases. These individuals perform database administration and maintenance as their primary area of responsibility, or work in environments where databases play a key role in their primary job.

The secondary audiences for this course are individuals who develop applications that deliver content from SQL Server databases.

Objectives:

- After completing this course, students will be able to:
 - Provision a Database Server
 - Upgrade SQL Server
 - Configure SQL Server
 - Manage Databases and Files (shared)
 - Provision, migrate and manage databases in the cloud
-

Prerequisites:

This course requires that you meet the following prerequisites:

- Basic knowledge of the Microsoft Windows operating system and its core functionality.
- Working knowledge of Transact-SQL.
- Working knowledge of relational databases.
- Some experience with database design

Testing and Certification

This course helps to prepare for exam 70-765

Content:

Module 1: SQL Server Components

This module describes the various SQL Server components and versions.

Lessons for module 1

- Introduction to the SQL Server Platform
- Overview of SQL Server Architecture
- SQL Server Services and Configuration Options

After completing module 1, you will be able to:

- Describe SQL Server components and versions.
- Describe SQL Server architecture and resource usage.
- Describe SQL Server services and how you manage the configuration of those services.

Module 2: Installing SQL Server

This module describes the process to install SQL Server 2016.

Lessons for module 2

- Considerations for SQL Installing Server
- TempDB Files
- Installing SQL Server
- Automating Installation

Lab : Installing SQL Server

- Preparing to install SQL Server
- Install an instance of SQL Server
- Perform post installation checks
- Automating Installation

After completing module 2, you will be able to:

- Describe the considerations when installing SQL Server.
- Describe TempDB files.
- Install SQL Server.
- Automate a SQL Server installation.

Module 3: Upgrading SQL Server to SQL Server 2017

This module describes the process for upgrading to SQL Server 2017.

Lessons for module 3

- Upgrade Requirements
- Upgrade SQL Server Services

After completing module 4, you will be able to:

- Describe Data Storage with SQL Server.
- Manage Storage for System Databases.
- Manage Storage for User Databases.
- Move and Copy Database Files.
- Describe and use Buffer Pool Extensions.

Module 5: Performing Database Maintenance

This module covers database maintenance plans.

Lessons for module 5

- Ensuring Database Integrity
- Maintaining Indexes
- Automating Routine Database Maintenance

Lab : Performing Database Maintenance

- Use DBCC CHECKDB to Verify Database Integrity
- Rebuild Indexes
- Create a Database Maintenance Plan

After completing module 5, you will be able to:

- Ensure Database Integrity.
- Maintain Indexes.
- Automate Routine Database Maintenance.

Module 6: Database Storage Options

Describe SQL Server storage options.

Lessons for module 6

- SQL Server storage Performance
- SMB Fileshare
- SQL Server Storage in Microsoft Azure
- Stretch Databases

Lab : Implementing Stretch Database

- Run Stretch Database Advisor
- Implement Stretch Database
- After completing module 6, you will be able to:
 - Describe SQL Server Storage Performance.
 - Describe SMB Fileshare.
 - Explain SQL Server Storage in Microsoft Azure.
 - Describe Stretch Database.

Module 7: Planning to Deploy SQL Server on Microsoft Azure

SQL Database.

Lessons for module 8

- Database Migration Testing Tools
- Database Migration Compatibility Issues
- Migrating a SQL Server Database to Azure SQL Database

Lab : Migrating SQL Server Databases to Azure

- Perform Migration Testing
- Migrate a SQL Server Database to Azure SQL Database
- Test a Migrated Database

After completing module 8, students will be able to:

- Describe various database migration testing tools.
- Explain database migration compatibility issues.
- Migrate a SQL Server database to Azure SQL database.

Module 9: Deploying SQL Server on a Microsoft Azure

Virtual Machine

This module describes how to deploy SQL Server on

Microsoft Azure VMs.

Lessons for module 9

- Deploying SQL Server on an Azure VM
- The Deploy Database to a Microsoft Azure VM Wizard

Lab : Deploying SQL Server on an Azure Virtual Machine

- Provision an Azure VM
- Use the Deploy Database to Azure VM Wizard

After completing module 9, students will be able to:

- Deploy SQL Server on an Azure VM.

Use The Deploy Database to a Microsoft Azure VM

- Wizard.

Side by Side Upgrade: Migrating SQL Server Data and

- Applications

Lab : Upgrading SQL Server

- Create the Application Logins
- Restore the backups of the TSQL Database
- Orphaned Users and Database Compatibility Level

After completing module 3, you will be able to:

- Describe the upgrade requirements for SQL Server.
- Upgrade SQL Server.
- Migrate SQL Server data and applications.

Module 4: Working with Databases

This module describes the preinstalled system databases, the physical structure of databases and the most common configuration options related to them.

Lessons for module 4

- Introduction to Data Storage with SQL Server
- Managing Storage for System Databases
- Managing Storage for User Databases
- Moving and Copying Database Files
- Buffer Pool Extension

Lab : Managing Database Storage

- Configuring tempdb Storage
- Creating Databases
- Attaching a Database
- Enable Buffer Pool Extension

This module describes how to plan to deploy SQL Server

on Azure.

Lessons for module 7

- SQL Server Virtual Machines in Azure
- Azure Storage
- Azure SQL Authentication
- Deploying an Azure SQL Database

Lab : Plan and Deploy an Azure SQL Database

Plan an Azure SQL Database, Networking, performance

- tiers, security
- Provision an Azure SQL Database
- Connect to an Azure SQL Database

After completing module 7, you will be able to:

- Describe SQL Server Virtual Machines in Azure.
- Describe Azure Storage.
- Explain Azure SQL Authentication, auditing and compliance.
- Deploy an Azure SQL Database.

Module 8: Migrating Databases to Azure SQL Database

This module describes how to migrate databases to Azure

- Configure SQL Server Connections

Module 10: Managing databases in the Cloud

This module describes how to manage SQL Server on

Azure.

Lessons for module 10

- Managing Azure SQL Database Security
- Configure Azure storage
- Azure Automation

Lab : Managing Databases in the Cloud

- Add data masking
- Use Azure automation to stop Virtual Machines

After completing module 10, students will be able to:

- Manage Azure SQL Database Security.
- Configure Azure storage.
- Implement Azure Automation.
